

- **Btw, I was looking at the USAC website and the 470 shows a need for 80 AP's plus 6 switches , I thought I only saw 41 AP's in the RFP? Can you clarify for me....?**
  - We are looking to replace and expand our coverage of wireless to handle a 1:1 or 2:1 environment. The old setup can not handle a 1:1 environment. The 80 access points is an estimate and may change based on your recommendations. WE need new switches to replace the existing older switches.
- **What width are drop ceiling rails? flush mount or recessed??**
  - Below are two pictures of the measurement of the rails and our ceiling type. I spoke to our Director of Facilities and we both don't under the questions. So I though the picture would be the best answer.
